IIC Singapore, in cooperation with TRPC, and Microsoft is organizing a forum on cyber security.

On behalf of IIC Singapore, TRPC invites you to participate in this forum on Tuesday 26th November. This session will follow Chatham House rules. As seating will be limited for this session please RSVP at your earliest convenience.

**About the Forum:**

Not a week passes without a cyber-attack taking place somewhere. Using data from the US, in 2013 most attacks were criminal in motivation as recorded by [http://hackmageddon.com/category/security/cyber-attacks-statistics/](http://hackmageddon.com/category/security/cyber-attacks-statistics/)

The most attacked sector was financial services. Singapore, due to its interconnectivity, “is internationally ranked fourth highest in cybercrime rate and this is expected to increase” according to Hee Jhee Jiow (NUS) in the Jan-July 2013 edition of the International Journal of Cyber Criminology.

What can be done to reduce the risk and reduce the losses? Risk reduction has to be based on a holistic, that is to say, not just safeguards against specific threats, and not just identifying assets at risk, but a review of how the entire enterprise (public or private sector) is marshalled to minimize vulnerabilities, to recognize attacks in good time and to prevent major losses when they occur.

**Registration:**

---

**Speakers**

**Alastair MacGibbon**, Director - Centre for Internet Safety, University of Canberra

**Rebecca Ledingham**, Cyber Outreach Project Manager, INTERPOL Global Complex for Innovation

**Rob Bratby**, Managing Partner - Olswang Asia LLP

On the Budapest Convention

On ACCA’s 14-country Data Sovereignty study

---

Singapore is preparing a National Cyber Security Masterplan 2018 and will soon host Interpol’s Global Complex. Singapore is a financial and wealth management centre, a regional data centre and a hub for cloud computing, and companies based here face the task of an enterprise-approach to cyber-security.

This forum will be devoted to examining sensible and proportional approaches to cyber-security as an urgent issue.
